

AMMAD ZAHID

FULL-STACK WEB DEVELOPER

Lahore, Punjab, Pakistan | ammadzahid53@gmail.com | github.com/ammadzahid | [Portfolio](#)

SUMMARY

Full-stack web developer currently working on-site in Lahore as the sole developer at Energy Alternatives — owning server, backend, frontend, and testing end-to-end. Hands-on with React, TypeScript, PHP, MySQL, and WordPress / WooCommerce, with a track record of shipping production websites, internal tools, and live e-commerce stores — including a multi-role Solar Project Tracking System, a 54+ page corporate site, and a Woodmart-powered online store. Comfortable taking projects from empty repository to deployed product without supervision. Looking to join a growth-oriented software house to contribute to product teams and take on larger full-stack challenges.

TECHNICAL SKILLS

React, TypeScript	PHP, Laravel (Beginner)	Server Setup & Deployment
JavaScript (ES6+)	MySQL, REST APIs	cPanel, Git / GitHub
HTML5, CSS3, SASS	WordPress, WooCommerce	Responsive Design
Tailwind CSS, Framer Motion	Elementor, Woodmart Theme	Role-based Auth, PDF Gen

PROFESSIONAL EXPERIENCE

ENERGY ALTERNATIVES — LAHORE, PAKISTAN (ON-SITE) Oct 2025 to Present

Project Title: Company Website

Link: <https://energyalternatives.com.pk/>

- **Admin Panel:** Built a full-featured admin dashboard to manage service pages, testimonials, project gallery, homepage popups, and quotation requests — giving the business team complete content control.
- **Quotation Form:** Designed and implemented a multi-step quotation request form with validation, backend storage, and admin-side lead management — directly feeding the sales pipeline.
- **Solar Calculator:** Developed an interactive solar calculator that estimates system size, cost, and savings based on user load inputs — a key lead-generation tool on the homepage.
- **Responsive Design:** Delivered pixel-perfect, mobile-first layouts across 14+ service pages (Solar, Biomass, Hydro, EV Charging, Kuka Cable, Tunnel Farming, Irrigation, CCTV, and more), tested across all breakpoints.
- **Smooth & Attractive UI:** Crafted an engaging experience with animated stat cards, sticky Table of Contents, smooth scroll, hover effects, and a consistent design language across the site.

- **Fast & Error-Free Code:** Wrote clean, modular PHP with reusable include partials and array-driven card loops, optimized Tailwind for minimal bundle size, and shipped production pages with zero breaking bugs.
- **Full Ownership:** Handled server setup, hosting / domain configuration, deployments, and post-release QA independently — without a dedicated DevOps or QA team.

ENERGY ALTERNATIVES — INTERNAL PRODUCT

2025 to Present

Project Title: Solar Project Tracking System (React + TypeScript / PHP + MySQL)

Live App: <https://projecttracking.steelandstyles.com/>

Source: https://github.com/ammadzahid/EA_Project_Tracking_System

- Architected and built a live multi-role project-management platform (Selling, Planning, Team Leader, Super Admin) using React + TypeScript (Vite) and PHP + MySQL.
- Developed the Team Leader dashboard with step-deadline tracking, days-remaining countdowns, late/overdue badges, and an in-browser file viewer for project attachments.
- Built a delay-reason reporting flow that auto-notifies the Planning team, backed by a custom setDelayReason REST endpoint and a dedicated delay_reason database column.
- Implemented role-aware PDF reporting: a Planning report (timeline, deadlines, delay reasons — no budget data) and an Admin report (full metadata + financials), enforcing strict visibility rules.
- Produced safe SQL migrations, deployment packages, and branded company assets — taking the system from empty repository to deployed production.

STEEL & STYLES — E-COMMERCE STORE (CLIENT PROJECT)

2025 to Present

Project Title: Steel & Styles Online Store (WordPress + WooCommerce + Woodmart + Elementor)

Link: <https://steelandstyles.com/>

- **WooCommerce Store:** Built and maintain a full e-commerce store on WordPress using WooCommerce — product catalog, cart, checkout, order management, and secure payment flow.
- **Custom Design:** Delivered a premium brand experience using Woodmart theme and Elementor, customized to match the Steel & Styles identity with custom sections, banners, and product layouts.
- **Responsive Storefront:** Optimized the entire store for mobile, tablet, and desktop shoppers — smooth product browsing, search, filtering, and checkout on every device.
- **Performance, SEO & Maintenance:** Tuned images, caching, and plugins for fast page loads with clean URL structure; handle product uploads, theme / plugin updates, and backups to keep the store reliable in production.

Project Title: Modern Grocify Web App

Link: <https://grocifywebapp/>

- **Modern Frameworks:** Building a professional app using React.
- **State Management:** Utilizing hooks for dynamic data handling.
- **Core Feature Development:** Implementing essential e-commerce logic (cart, search).
- **UI/UX:** Ensuring a responsive and modern user interface.

TECH VIKINGS FAISALABAD-PAKISTAN**May 2024 to July 2024**

Project Title: Modern Real Estate Listing Website

Link: <https://property-sale-website>

- Developed the entire front-end of a property listing website using HTML, SCSS (Sass), and JavaScript.
- Focused on Responsive Design and a Mobile-First approach to ensure the site works perfectly across all screen sizes.
- Implemented a clean UI/UX with smooth animations and interactive features for a better user experience.
- Managed version control and collaboration using Git/GitHub.

EDUCATION**Bachelor of Science in Computer Science****September 2021 - July 2025**

RIPHAH INTERNATIONAL UNIVERSITY | 2021-2025 Bachelor of Science in Computer Science
CGPA 3.5

Final Year Project **CARE GIVER APP**
